VIT BHOPAL

PROJECT REPORT

Name: Manas Raturi

Registration Number: 25BAS10041

Branch: Aerospace Engineering

Year: 1st year, 2025-2029

Course Code: CSE0001

Date: 31st March, 2026

Introduction

This project was completed as part of the Digital Literacy course, where I took on the role of a Student Digital Ambassador. The aim of the project was to build awareness about responsible and effective use of digital tools among students. Through five structured tasks, I explored different aspects of digital literacy, including online safety, professional communication, collaboration platforms, and cybersecurity awareness.

The project involved creating an infographic, setting up professional profiles, working with online tools, drafting formal emails, and studying cybercrime scenarios. Each task helped me understand how digital skills are essential in academic and professional environments. This project not only improved my technical knowledge but also enhanced my awareness of safe and responsible online behavior, which is important in today’s digital world.

Task 1 Write-up

In Task 1, I created a Digital Literacy Awareness infographic using Canva. The infographic was designed as a one-page visual resource to help students understand the importance of digital literacy. It included key topics such as safe internet practices, useful digital tools for students, and maintaining a professional online presence.

The design used simple visuals, icons, and short text to make the information easy to understand and engaging. I focused on keeping the layout clean and visually appealing so that it could effectively communicate the message to my batchmates.

One challenge I faced was organizing multiple topics into a single page without making it cluttered. I had to carefully select important points and present them concisely. This task helped me improve my design skills and taught me how to present information visually in an effective way.

Task 2 Write-up

In Task 2, I created and updated my profiles on platforms such as GitHub, LinkedIn, and Kaggle. These platforms are widely used for professional networking, showcasing projects, and learning new skills.

On GitHub, I created a repository and added a profile README to introduce myself. On LinkedIn, I updated my education details to reflect my current academic status. Kaggle was explored as a platform for learning data science and participating in competitions.

The purpose of setting up these platforms is to build a professional digital presence. Over the next four years, I plan to regularly update my profiles, upload projects, and connect with professionals in my field. These platforms will help me prepare for internships and job opportunities.

This task helped me understand the importance of maintaining a professional online identity and how it can impact future career growth.

Task 3 Write-up

In Task 3, I explored both coding and collaboration platforms. I completed a beginner-level challenge on HackerRank, which helped me practice basic programming skills and understand problem-solving approaches.

Additionally, I used Google Forms to create a Digital Literacy Awareness Quiz consisting of five questions, including multiple-choice and short-answer types. The form was shared with others, and responses were automatically recorded in Google Sheets.

This allowed me to analyze responses and understand the level of awareness among students regarding digital safety and online practices. Creating the form and linking it to Sheets helped me learn how data collection and analysis work in real scenarios.

These tools are very useful academically, as they simplify surveys, feedback collection, and collaborative work. This task improved my technical and analytical skills and showed how digital platforms can be used effectively for learning and research.

Task 4 Write-up

In Task 4, I worked on professional communication by drafting formal emails and creating a social media checklist. A situation where poor digital communication can cause problems is when a student sends an informal or unclear email to a professor. For example, using casual language or not mentioning the purpose properly may lead to misunderstandings or being ignored.

Such situations can be avoided by following proper email etiquette, including a clear subject line, polite tone, and structured content. This task helped me understand how important professional communication is in academic and workplace environments.

Overall, I learned how to write clear and respectful emails and how responsible communication can create a positive impression.

Task 5 Write-up

In Task 5, I studied cybercrime, specifically ransomware attacks, and created a prevention checklist. One thing that surprised me was how easily attackers can gain access to systems through simple actions like clicking on malicious links or downloading infected files.

I realized that many users are unaware of these risks and do not take basic precautions. This task made me more conscious of my online behavior.

One habit I will change is being more careful while clicking on links and ensuring that I verify sources before downloading anything. I will also make sure to regularly update my passwords and enable security features.

This task increased my awareness of cybersecurity and encouraged me to adopt safer digital practices in daily life.

Conclusion

Overall, this project provided a valuable learning experience by combining practical tasks with real-world applications. I gained knowledge about digital tools, online safety, professional communication, and cybersecurity.

Each task helped me develop important skills that are essential for both academic and professional success. I also learned how to manage my digital presence responsibly and effectively.

This project has improved my confidence in using digital platforms and has prepared me to handle real-world digital challenges. The knowledge gained will be useful throughout my academic journey and future career.
